About Imagine Learning

At Imagine Learning, we're passionate about bringing language and literacy instruction to the students who need it most. That's why we used state standards and scientifically based research to develop Imagine Learning English, an innovative software program that uses first-language support, continual assessment, and differentiated instruction to meet the needs of four key student populations: English learners, struggling readers, students with disabilities, and early childhood education students. Imagine Learning English gives students one-on-one instruction and scaffolded support while keeping teachers informed about student progress through real-time reports. Visit our website at http://www.imaginelearning.com to find out how we're giving students, parents, and teachers essential tools for language and literacy development.
